

AYBIKE KILIC

aybikekilic7@gmail.com

<https://www.linkedin.com/in/akilic/> | <https://github.com/akilic9> | <https://euruss.itch.io/>

Enthusiastic software developer keen on learning, unlearning and relearning. A good team player who enjoys challenges and overcoming them. An analytical thinker with good problem-solving skills.

Portfolio Website: www.aybike-kilic.com

Technical Skills: C++, Unreal Engine, C#, Unity, Vulkan, OpenGL, Visual Studio, Rider, Perforce, Git, Dear ImGui.

WORK EXPERIENCE

Junior Programmer | Blue Dot Games, UK

06/2025 – Present

- Released a large-scale multiplayer FPS, '83, using **Unreal Engine** and **C++**, working on gameplay and UI features.
- Implemented new features as well as optimising existing features for client and server performance.
- Used profiling tools to identify and fix performance bottlenecks.
- Used design patterns, such as object pooling, for increased efficiency.
- Took responsibility in high pressure situations, during live service and hot fixing, with fast implementations, debugging and bug fixes.
- Volunteered to cover technical support for playtests and betas. Monitored servers and hotfixed critical issues.

Programming Mentee | Ubisoft Leamington, UK

10/2023 – 01/2024

- Using the provided **C++** API, developed a game from scratch under guidance of an expert programmer.
- Explored concepts such as finite state machines, collision detection and handling, object pooling, artificial intelligence pathfinding, entity-component systems, object-component systems.
- Applied design patterns and commonly used algorithms in game development.

Software Engineer | Simsoft Information Technologies, Turkey

06/2022 – 06/2023

- Used **C++** and Qt, maintained and developed a ship bridge simulation software, worked on a large code base.
- Took part in architectural design of features. Designed robust, reusable and scalable code structure.
- Took ownership of features. Implemented and maintained whole components of simulation. Acted as sole maintainer of some products.
- Conducted presentations on development state, design and architecture of features.

Software Engineering Intern | Simsoft Information Technologies, Turkey

01/2022 – 05/2022

- Used **C++** and Qt on ship bridge simulation software.
- Performed tests on client hardware, analysed performance and presented findings.
- Created scripts to automate installation tasks on client hardware.

PERSONAL PROJECTS

Vulkan Render Engine (C++/Vulkan) 2024 - Present

Developed a mini render engine with **C++** and **Vulkan**. Implemented fundamental rendering pipelines, 3D space camera, 3D model loading with textures and Blinn-Phong lighting model.

Battle City with Custom Engine (C++/SFML) 2024

Built a custom 2D engine from scratch using **C++** and SFML. Made the game "Battle City" on this engine. Implemented state machines, data-driven design for resource management and maps, input manager using callbacks, collision detection and handling.

Monza Run (C++/OpenGL) 2024

Made a 3D racing game with **C++/OpenGL**. Implemented primitive shapes, texture mapping, collision detection and handling, camera techniques (1st person, 3rd person, cinematic, top-down), lighting and HUD. Created a track and terrain using splines.

Game Jams (C#/Unity)

2021 – Ongoing

Published games for several game jams using **Unity** and **C#**.

Worked with people from different backgrounds and disciplines.

Nightwatch: Required a complex system of interactables, inventory and objectives, was an enjoyable challenge.

Beware the Mines: Led and had full responsibility for programming. Implemented the gameplay and AI enemy behaviour in 48 hours.

EDUCATION

MSc Computer Games Technology (Distinction)

City, University of London, UK

2023 - 2024

BSc Computer Engineering (3.2/4.0)

Istanbul Okan University, Turkey

2018 - 2022
